Petroleum & Gas Engineering: HYDROCARBON RECOVERY MECHANISMS

Hydrocarbon exploration began in 1936 and has resulted in the discovery of about 200 oil and gas accumulations. Most of these are contained in Carboniferous to Permian series that were deposited during the post-rift stage of the basin evolution (Fig. 16.8).The Devonian syn-rift series contains only a small part of the total reserves of the DDB, in contrast to the Pripyat Trough where the ...

Methods of petroleum exploration and production (E&P) typically involve expensive, technologically driven approaches. During the prospecting phase, petroleum E&P includes the use of subsurface geologic evaluation, seismic data and large computing power to process the geophysical data. Drilling exploratory wells is also an expensive and risky undertaking. All decisions about investments made in ...

Increasing Hydrocarbon Recovery Factors

Exploration, by earth scientists, and petroleum engineering are the oil and gas industry's two main subsurface disciplines, which focus on maximizing economic recovery of hydrocarbons from subsurface reservoirs. Petroleum geology and geophysics focus on provision of a static description of the hydrocarbon reservoir rock, while petroleum engineering focuses on estimation of the recoverable ...

Total’s hydrocarbon exploration strategy is based on a broad and diverse portfolio and the rigorous selection of high-potential prospects, with economic profitability criteria considered very early in the process. Implemented to ensure the Group’s exposure to risk is balanced and to optimize value creation, this strategy aims to facilitate the discovery of over 400 million barrels of oil ...
